

Chapter 1: Meet Your Dashboard (Home Base)

When you first open the app, you will land on **Home Base**. This is a scoreboard that automatically adds up information about local businesses you might want to work with.

- **Total Prospective Clients:** The absolute number of all businesses you have found so far.
- **Missing a Website:** The number of businesses that don't have any website at all. (*Hint: These are your best targets!*)
- **Needs a Redesign:** Businesses that have a website, but it looks like it was made 20 years ago or doesn't work on mobile phones.
- **Solid Existing Website:** Businesses that already have great websites. You can look at these for inspiration.
- **Outreach Conducted:** The number of business owners you have already sent a message to.
- **Expressed Interest:** Business owners who replied and said, *"Tell me more!"*
- **Projects Won** 🎉: The number of businesses that hired you and paid you money!
- **Current Portfolio Pipeline Value:** This takes all the potential money you could earn from these jobs and adds it together into one giant number.

💡 **Super Trick:** If you click on the **"Missing a Website"** card, the app will instantly take you to your workspace and hide everything else, showing you *only* the businesses without websites!

Chapter 2: How to Add a New Business (Mission Setup)

Let's walk through adding a new business step-by-step.

1. Click the big blue button at the top right that says **"Add New Profile"**. A sliding window will pop out from the right side of your screen.
2. Fill out the boxes:
 - **Business Name:** What is the shop called?
 - **Classification:** What kind of business is it? (Restaurant, Cafe, Gym, Salon, etc.)
 - **City Location:** Where is it located?
 - **Website Quality:** Pick if they have no website, a bad website, or a good website.
 - **Project Value (\$):** Enter how much money you want to charge them to build their website (e.g., 3000).
 - **Next Scheduled Catch-Up:** Pick a calendar date when you want to message them next.
3. Scroll down and click the blue button at the bottom that says **"Commit Account State"**.
4. Boom! Your new business is saved safely in the app.

Chapter 3: The Magic Communication Engines

This is the coolest part of the app. Once a business is saved in your **Client Management Workspace**, look at its card. You will see three small buttons: **WhatsApp**, **Email**, and **Proposal**.

When you click one of these buttons, the app automatically writes a professional, persuasive message for you based on that specific business's flaws. It then teleports you to the **Content Preview Board** view so you can read it, copy it, or send it out instantly!

Walkthrough Example: Let's Win a Client!

Let's pretend you are walking down Main Street and you notice a brand-new bakery.

Step 1: Researching & Saving

You search for them on Google Maps. They are called "**Sunshine Bakery**" in **Austin**, but they have no website link!

- You open CRM Pro and click **Add New Profile**.
- You type in *Sunshine Bakery*, choose *Cafe*, type *Austin*, set the quality to *Missing a Website*, set the price to *2500*, set your catch-up date for today, and type in the notes: *"Brand new spot, busy location, but no way to order online."*
- Click **Commit Account State**.

Step 2: The First Contact

On your dashboard, your **Missing a Website** score goes up by 1, and your pipeline value increases by **\$2,500**!

- Go to your Workspace, find the Sunshine Bakery card, and click the **Email** button.
- The app automatically writes an email saying: *"Dear Team at Sunshine Bakery... I noticed you don't have an active web presence online in Austin... I built a custom layout blueprint for local cafes..."*
- A pop-up asks: *"Initialize native system mailto link?"* You click **Yes**, and your computer instantly opens your email app with the message completely typed out and ready to send to the owner!

Step 3: Upgrading the Score

Three days later, the owner emails you back and says they love your idea!

- You open CRM Pro, click the small pencil/edit icon on the Sunshine Bakery card.
- Change their **Relationship Status** from *New Contact* to *Expressed Interest*.
- Click **Commit Account State**.
- Look at your Home Base dashboard—your **Expressed Interest** meter has automatically updated, tracking your real-world progress like a pro!
